

Document Automation Suite

Improve Enterprise Content Accuracy & Quality

Do you want to ensure access to the latest revision of content?

Would you like to eliminate redundant, time consuming data entry for the same content?

Do you want to be able quickly review changes of document sections - instead of the entire document?

Would you like to better enforce company standards, simply by ensuring documents have the correct headers and footers?

Fishbowl Network Procedure - Parsed Doc

Fishbowl Network Procedure - Parsed Doc, Rev. 32 Release Date: 5/27/2009

PRINTING NOTICE - Individuals using a printed copy are responsible for ensuring that they are using the governing version.

Document Automation Suites makes all these possible and helps you get the most out of your Oracle UCM investment!

Rapidly Provide Value to Content Authors

Document Automation Suite helps Oracle UCM users eliminate redundant data entry, but most importantly, ensures metadata for the native document and the document in UCM match. The software has three components:

- **Native File Updater:** Pulls metadata from Oracle UCM, such as revision date, author, etc., and updates the information in the native file - synching it with Oracle UCM metadata.
- **Metadata Parser:** Extracts information from content and parses it into Oracle UCM metadata fields, such as author and title. This ensures consistent information across content sources and eliminates the re-keying of content as metadata.
- **Document Compare:** Compare revisions of documents in Oracle UCM providing users with visibility into changes that occurred from one version to the next. This is critically important for workflow steps so that users can see the changes they are approving.

Additional features include:

- Ability to update static and dynamic PDF forms.
- Ability to parse static and dynamic PDF forms.
- Support for systems using Oracle UCM's File Store Provider, which can be configured to store content in a shared file system, database, or custom hardware - all based on metadata values.
