

Inspection Report Automation™

Automatically create quality inspection reports based on Pro/ENGINEER® drawings

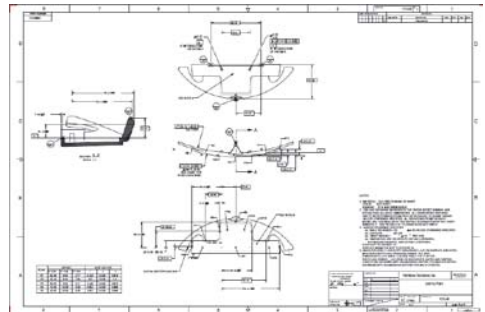

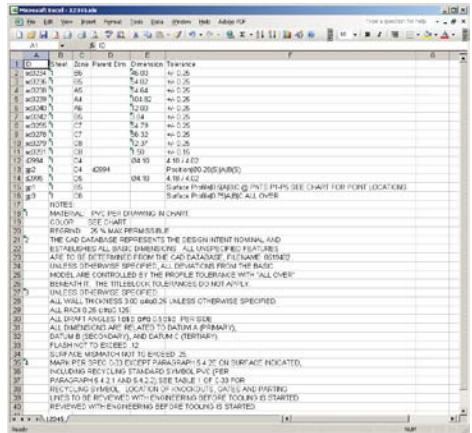

Business Need

Quality assurance requires companies to create quality inspection reports with every critical dimension and note from a Pro/ENGINEER drawing. The drawings' inspection reports must also be modified for each design change made to the drawing. Currently, these inspection reports are manually created, wasting hours of valuable engineering time and providing numerous opportunities for errors.

Business Solution

Inspection Report Automation automates the creation of these spreadsheets; including all dimensions, geometric tolerances and notes associated with a Pro/ENGINEER drawing.

- Works with created and shown dimensions
- Handles basic and inspection dimensions
- Exports geometric tolerances
- Exports drawing notes
- Includes drawing sheet and zone information
- Handles all types of dimensional tolerances
 - Nominal
 - Limits
 - Plus
 - Minus
 - Symmetric
 - Asymmetric

Supported Platforms

- Pro/ENGINEER Wildfire 3.0
- Pro/ENGINEER Wildfire 4.0
- Can be compiled against older versions of Pro/ENGINEER
