

Multi-Field Configurator™

Fishbowl Solutions® Multi-Field Configurator™ makes customization of Oracle Check-In and Search screens based on controlling fields a breeze.

Document management systems similar to Oracle UCM are commonplace in many organizations and provide cost-savings and numerous benefits. Users can now quickly and easily store, search, and access the content that is important for doing their jobs. For example, features like metadata simplify content accessibility by identifying all content that relates to a certain project. Users can specify a document type when checking in content, making it easy to locate all documents of a particular type like "Policies and Procedures".

Business Problem

Implementing Oracle UCM across the entire enterprise can mean a plethora of metadata fields. Companies want maximum document management leverage but they must also ensure the system is easy to use across the wide array of users.

Business Solution

Benefits of Multi-Field Configurator™

- Minimize metadata uncertainty for users
- Require specific metadata for different document types
- Change captions based on document type
- Empower business analysts to configure available options

Many years of experience working with the Oracle Content Management System allows Fishbowl Solutions® to deliver a Oracle add-on solution that:

- Simplifies tasks that would otherwise require a deep understanding of the Oracle system
- Pairs powerful metadata models and an easy-to-use system
- Helps companies get the system up-and-running in a short amount of time
- Maintains access to a single, companywide repository
- Business users can easily customize Oracle Check-In and Search screens based on controlling fields and quickly locate the information they need, without involving information technology resources
