Fishbowl Solutions Portal Integration Suite

Consolidate Architecture, Reduce Costs and Deliver a Rich User Experience

Consumers of your information, whether external or internal, have come to expect E2.0 functionality to foster quick and easy collaboration. You have a need for a solution that simplifies the information architecture required to support collaboration functionality. As a software and services organization Fishbowl has recognized experts in Enterprise Information Management, including Oracle WebCenter Content and Portal. Our portal integration solution consolidates your architecture into one central management system, delivers a rich user experience, and reduces your administrative costs.

Today you...

- Spend days building separate design elements and infrastructure for each web site and web applications you manage.
- Have users asking for E2.0 functionality like RSS feeds, Instant Messaging, Wikis, Blogs, and third party applications.
- Spend more and more money on administrative costs to support your compounding architectures.

What if...

- You could reuse existing architecture to roll out new web sites and web applications, quickly.
- You were able to easily deliver the rich user experience and personalization your consumers have come to expect.
- You could save at least 25 percent on your administrative cost per year by simplifying your administration and maintenance of websites.

With Fishbowl's Portal Integration Suite, You Can

Built on the industry leading Oracle platform, our portal integration solution allows for easy integration between Oracle WebCenter Content and Oracle WebCenter Portal technologies, enabling you to consolidate your architecture and leverage E2.0 functionality like RSS feeds, Blogs, and Wikis. Our solution leverages the Content Integration Suite (CIS) to store content in the secure WebCenter Content system and serve it up to end users through a portal view. We leverage personalization to display content in the portal view based on attributes of the consumer. This allows end users to see the most pertinent content related to them. Our solution leverages Portlets created to meet JSR-286 standards so they can be reused across multiple sites enabling quick set-up, rollout, and management. These Fishbowl Portlets enable two types of functionality: WYSIWYG Editing and query based content population from your WebCenter Content system. Users are able to easily contribute their own content to each site and define what items from the WebCenter Content should display on each page. Fishbowl's ECM and portal expertise combine to deliver this time and money saving solution.

Summary

- Consolidate Your Architecture
- Leverage E2.0 Technologies
- Reduce Administration Time
- Personalize Content
- Enable Single Sign-on
- Reuse Content and Design
- Save Money

Success You Can See

"By leveraging WebCenter Content as their repository for enterprise content and integrating it with Portal, the organization saves 25 percent per year on administration costs because all of their websites are on a single architecture. The organization also saves \$72,000 per year on licensing and maintenance costs, compared to the cost of implementing and supporting a separate Web Content Management system."
