

Web-based Batchloader™ for Oracle UCM

Provides a drag-and-drop interface for contributing multiple items to the Content Server, assigning metadata by item or group

- Quickly load large volumes of content into the Content Server
- Empower business users to load volumes of content via a Web browser

Business Need

Currently, in order to load a large amount of content with varying metadata into Oracle UCM it requires either migrating data one-by-one or the manual generation of a text file to be used for batch loading. End users do not have the expertise to create these files and the built in Web-based Batchloader requires must be executed on the server which they typically don't have permissions to access.

Business Solution

Web-based Batchloader allows various departments to rapidly add content into the Content Server in manageable chunks. It has:

- User-friendly interface
- Browser-based batch loading that is accessible anywhere via the web
- Allows for changing of individual DocInfo fields on a file-by-file basis
- Automatically reads the metadata configuration specific to your environment such as custom metadata fields, document types, security groups, etc.
